Q2.

All of lab 13.

1. Created a VPS and

2. Generated an SSH key from linux virtual machine

3. Linked the SSH key to the VPS

4. Created a new sudo user

5. Brainstormed what the content of our project will be.

Q3.

No one was blocked by anyone (at least for me). Managing git blocked me for a while (because I haven't used it a while).

Q4.

Navigating through the OVHcloud site was a bit difficult because at first I wasn't really sure what to look for. But now, I'm slowly starting to get more comfortable with it.

Q5. Current state = OK.
